

Vehicle Detection from Color Images

Militaru Cristian

Gr. 30431

Problem statement

- Given:
 - A color video (sequence of images)
- Find:
 - The vehicles in each moment

Input

Output

Application

- Vehicle counter
 - Minimize traffic light waiting time

How?

- Optical flow
 - We need 2 consecutive frames.

How?

- Optical flow

Image #1

How?

- Optical flow

Image #2

How?

- Optical flow

Optical Flow

How?

- Optical flow

Optical Flow
Magnitude

(black = no
movement,
white = big
movement)

In real world

Image #1

In real world

Image #2

In real world

Big optical flow was highlighted with green

In real world

+ Clustering and filtering

Problems

- Noise
 - Remove the moving areas that are too small
